

THE WOMEN OF OPENSTACK

Why do we get together apart from the rest of the conference?

There are many reasons for women in tech to want to connect on a one-on-one basis.

We have loads of things in common. In addition to open source software – education, career planning, industry innovations and mentoring are just a few of the hot topics that frequently come up in conversation. We talk about our ideas in small groups and revisit our objectives each Summit to make sure we're still on track. It's kind of like an informal Design Summit session for women.

We celebrate our successes. There are so many exciting things happening in the lives and careers of the Women of OpenStack, but you might not hear about them unless you spend some quality face-time with your peers and mentors at the Summit. Learn best practices; collaborate with female colleagues and set new goals for the next launch cycle.

We uncover new presenters. Women speakers in tech can be few and far between. When we meet in-person at these gatherings, we have the opportunity to discuss new track ideas, suggest fellow women speakers and brainstorm potential future workshops for women.

We're still a minority. We're growing, but encouraging women's outreach efforts and finding ways to evoke more front-row participation in the open source arena remains a key factor.

We light the path for future generations. Through support, guidance, mentoring and vigilance, we help the underrepresented Women of OpenStack find a strong voice of leadership in coding, documentation, design and tech marketing.
